

PURCHASE SERVICES

Purchase Services represent an untapped source of savings across the healthcare supply chain.

When a purchased service is correctly benchmarked, appropriately contracted and effectively managed, a facility can realize meaningful savings that can be passed on and used to improve patient care.

The typical savings potential on purchased services range from 10% - 35%, depending on the contract category.

Lower costs are achievable for facilities with limited volume when accessing the Rural Health Alliance Collaborative through local, regional, and national contracts.

Rural Health Alliance offers a free cost analysis to identify member cost saving opportunities.
